

WALK-BEHIND BELT LOADER

Powered walk-behind loader improves speed and efficiency

Keep luggage and packages moving with our walk-behind belt loader. You'll get the cost savings and maneuverability of a walk-behind unit with greater durability than a drivable machine. Simply leave the loader near the gate and use the stowable tiller arm for precise placement at the plane. By eliminating the drive components found in most belt loaders, we've not only increased longevity and reduced cost, but we've also significantly reduced maintenance requirements. And our durable components and rigorous testing ensure your loader will last and work efficiently for years. Safe, continuous operation with no downtime: that's how we keep you moving.

KEY FEATURES

1. Fixed guardrails keep luggage and packages moving
2. Operator controls on each end of the loader ensure easy access from any position
3. The roller-supported belted bed operates in forward and reverse for load and unload operation
4. Automatic hydraulic braking and five emergency stop buttons for safety
5. Easily load and offload at a variety of aircraft heights, accommodating door sill bases to up to 119 in. (3 m) off of the ground

OPTIONS

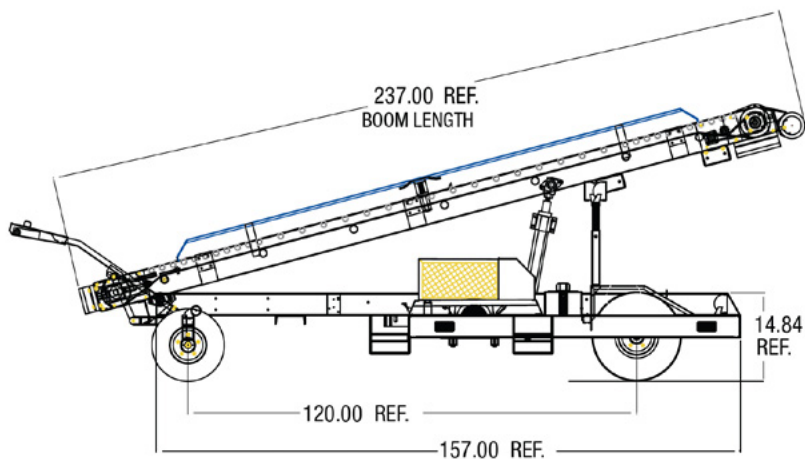

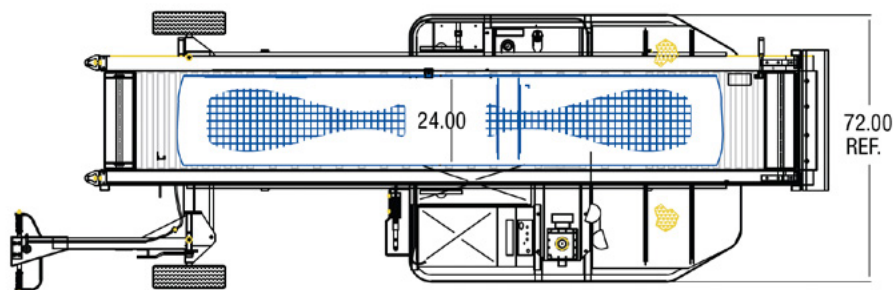

- Rear lift kits incorporate a second hydraulic lift to accommodate varying worker or truck transfer heights on the end opposite the aircraft
- Retractable or flip-up side guides available
